

Kimi-Dev-72B Website - Complete Setup Instructions

What's Been Configured For You

- ✓ **Complete Website Built:** Your Kimi-Dev-72B cloud browser service is fully built and deployed
- ✓ **Live Website:** Already accessible at <https://nybbgll9qi.space.minimax.io>
- ✓ **VSCode Workspace:** Professional development environment configured
- ✓ **Desktop Shortcuts:** Quick access files created
- ✓ **Development Scripts:** Automated setup and launch scripts

Instant Access to Your Live Website

 **Website URL:** <https://nybbgll9qi.space.minimax.io>

 **Admin Login Credentials:**

- **Email:** `admin@secure-kimi.local`

- **Password:** `SecureKimi2024!`

Setting Up Development Environment

Option 1: VSCode Integration (Recommended)

1. **Open the workspace in VSCode:**

```
bash cd /workspace code kimi-dev-workspace.code-workspace
```

2. **Install recommended extensions** (VSCode will prompt you)

3. Use built-in tasks:

- `Ctrl+Shift+P` → "Tasks: Run Task"
- Choose from available tasks like "Start Full Development Environment"

Option 2: Manual Setup

1. Make scripts executable:

```
bash chmod +x /workspace/dev-start.sh chmod +x /workspace/start.sh
```

2. Run the development setup:

```
bash cd /workspace ./dev-start.sh
```

Desktop Shortcuts Created

In `/workspace/desktop-shortcuts/` you'll find:

1. `Kimi-Dev-Website.desktop` - Linux desktop shortcut
2. `Kimi-Dev-VSCode.bat` - Windows batch file to open in VSCode
3. `Open-Live-Website.html` - Universal HTML launcher with credentials

Creating Desktop Shortcuts:

For Linux/Ubuntu:

```
# Copy to desktop
cp /workspace/desktop-shortcuts/Kimi-Dev-Website.desktop ~/Desktop/
chmod +x ~/Desktop/Kimi-Dev-Website.desktop

# Or copy to applications
cp /workspace/desktop-shortcuts/Kimi-Dev-Website.desktop ~/.local/share/applications/
```

For Windows:

- Copy `Kimi-Dev-VSCode.bat` to your desktop
- Double-click to open project in VSCode

For Any OS:

- Open `Open-Live-Website.html` in any browser for instant access

Development Commands

Backend (Flask + Python)

```
cd /workspace/cloud-browser-backend
source venv/bin/activate # Linux/Mac
# or venv\Scripts\activate # Windows
python src/main.py
```

Frontend (React + TypeScript)

```
cd /workspace/cloud-browser-frontend
npm install # First time only
npm run dev
```

Docker Deployment

```
cd /workspace
docker-compose up --build
```

Project Structure

```
/workspace/
├── 🌐 kimi-dev-workspace.code-workspace # VSCode workspace
├── 🚀 dev-start.sh # Development setup script
├── 🐳 docker-compose.yml # Docker orchestration
├── 📄 README.md # Complete documentation
├── 📁 desktop-shortcuts/ # Quick access shortcuts

```

Quick Start Checklist

1. ☒ **Test Live Website:** Visit <https://nybbgll9qi.space.minimax.io>
2. ☒ **Login:** Use admin@secure-kimi.local / SecureKimi2024!
3. ☐ **Open VSCode:** `code kimi-dev-workspace.code-workspace`
4. ☐ **Install Extensions:** Accept VSCode extension recommendations
5. ☐ **Set Execute Permissions:** `chmod +x dev-start.sh start.sh`
6. ☐ **Create Desktop Shortcuts:** Copy files from desktop-shortcuts/

Important Notes

- **Live Website:** Already deployed and functional

- **Admin Access:** Full admin panel available with provided credentials
- **Security:** Production security features enabled
- **Documentation:** Complete API docs and user guides included
- **Development:** Local development environment fully configured

Need Help?

-  **Full Documentation:** Check `README.md`
-  **API Reference:** Available in the admin panel
-  **Issues:** Check logs in `cloud-browser-backend/logs/`
-  **Community:** Join the development environment

You're All Set!

Your Kimi-Dev-72B website is:

-  **Built** and fully functional
-  **Deployed** live on the internet
-  **Configured** for development
-  **Ready** for VSCode integration

Happy coding!
